

Ideation Phase: Brainstorm & Idea Prioritization Template

Date	25 September 2026
Team ID	6ab22227a614981d6d2c6451
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Define your problem statement:

- **How might we...** efficiently and accurately automate the migration of bulk employee data from external spreadsheets into ServiceNow without creating duplicate records, while also providing real-time visual analytics for the organization?
-

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm (Idea Listing):

1. Use the "Load Data" module to create an Import Set table as a staging area for Excel files.
2. Create a custom target table (u_employee_test) to store the finalized employee records.
3. Build a Transform Map to automatically map spreadsheet columns (Name, Email, Department, Location) to the target table fields.
4. Enable the **Coalesce** feature on the Employee ID field to ensure existing records are updated instead of duplicated.
5. Create visual reports (Pie Charts for Department, Bar Charts for Location) to track the imported data.
6. Consolidate the reports into a centralized "Employee Analytics Dashboard" for easy viewing.
7. Modify ACL permissions (pa_dashboards) to allow dashboard creation and sharing.

Group Ideas:

- **Group 1: Data Ingestion & Mapping (Ideas 1, 2, 3)**
 - *Focus:* Moving data from Excel into the ServiceNow environment smoothly.
 - **Group 2: Data Integrity & Deduplication (Idea 4)**
 - *Focus:* Ensuring the database remains clean during repeated uploads.
 - **Group 3: Analytics & Visibility (Ideas 5, 6, 7)**
 - *Focus:* Extracting insights from the imported data using Reports and Dashboards.
-

Step-3: Idea Prioritization

(Use this section to plot the grouped ideas on your Importance vs. Feasibility grid)

- **High Importance / High Feasibility (Do Now / Top Priority):**
 - Create the Import Set and Transform Map for the spreadsheet.
 - Enable Coalesce on the Employee ID to guarantee data integrity immediately.
- **High Importance / Low Feasibility (Do Next / Strategic):**
 - Configure ACL Admin Overrides to unlock Dashboard creation capabilities (requires specific security steps).
 - Build the centralized Employee Analytics Dashboard.
- **Low Importance / High Feasibility (Quick Wins):**
 - Create the custom target table (u_employee_test).
 - Generate standard standalone reports (Pie charts, Bar charts, List views).
- **Low Importance / Low Feasibility (Drop / Avoid):**
 - Manually entering employee records one by one (highly inefficient, bypasses the Transform Map goal).
