

Ideation Phase: Empathize & Discover

Date	25 September 2026
Team ID	6ab22227a614981d6d2c6451
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas: HR Data Administrator / System Admin

What does he/she THINK and FEEL?

- *(Worries & Aspirations, Major Preoccupations)*
- "I am stressed about accidentally creating duplicate employee records when I upload this new Excel sheet."
- "I hope the Transform Map correctly links the spreadsheet columns to the ServiceNow target table."
- "I feel relieved knowing the 'Coalesce' feature will update existing records rather than breaking the database."
- "I want a quick way to see total employee counts without having to export the data back to Excel."

What does he/she HEAR?

- *(What friends/boss/influencers say)*
- **Management:** "We need an updated, accurate headcount broken down by Department and Location by EOD."
- **Employees:** "My department and email details are outdated in the system."
- **IT Team:** "Stop doing manual data entry; use automated Import Sets and Transform Maps."

What does he/she SEE?

- *(Environment, Friends, Market Offers)*
- Massive, messy Excel spreadsheets containing hundreds of employee records that need to be migrated.

- Duplicate records in the system (e.g., two profiles for "Ajay") caused by previous manual entry errors.
- A standard ServiceNow list view that lacks immediate visual insights or analytics.

What does he/she SAY and DO?

- *(Attitude in public, Appearance, Behavior)*
- **Says:** "I spend hours every week manually cross-checking Employee IDs to avoid duplicates."
- **Says:** "I need a better way to track which records were 'Inserted' and which were 'Ignored' during uploads."
- **Does:** Uploads Excel files manually into staging tables.
- **Does:** Creates personalized list columns to try and organize the data.

PAIN

- *(Fears, Frustrations, Obstacles)*
- **Data Duplication:** Fear of corrupting the database with duplicate Employee IDs.
- **Time-Consuming:** Manual data entry and validation takes too much effort.
- **Lack of Visibility:** Cannot easily see data trends (like employee distribution across locations) without a centralized dashboard.

GAIN

- *(Wants/Needs, Measures of Success)*
- **Accuracy:** Automated deduplication using the "Coalesce" feature on the Employee ID field.
- **Efficiency:** A seamless Transform Map that updates existing data automatically.
- **Insights:** Real-time visual reporting (Pie charts for Departments, Bar charts for Location) grouped into a single, easy-to-read "Employee Analytics Dashboard".
