Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I spend hours manually cross-checking Employee IDs." • "I need a better way to track records."	THINKS • "I hope the Transform Map correctly links columns." • "I want a quick way to see total counts."
DOES • Uploads Excel files manually into staging tables. • Creates personalized list columns.	PERSONA NAME (HR Data Administrator) FEELS • Stressed about creating duplicate employee records. • Relieved knowing 'Coalesce' updates records.
