

## Data Flow Diagram

|                      |                                                |
|----------------------|------------------------------------------------|
| <b>Date</b>          | 25 September 2026                              |
| <b>Team ID</b>       | 6ab22227a614981d6d2c6451                       |
| <b>Project Name</b>  | Import Data using Transform Maps (Spreadsheet) |
| <b>Maximum Marks</b> | 4 Marks                                        |

### Data Flow Diagram

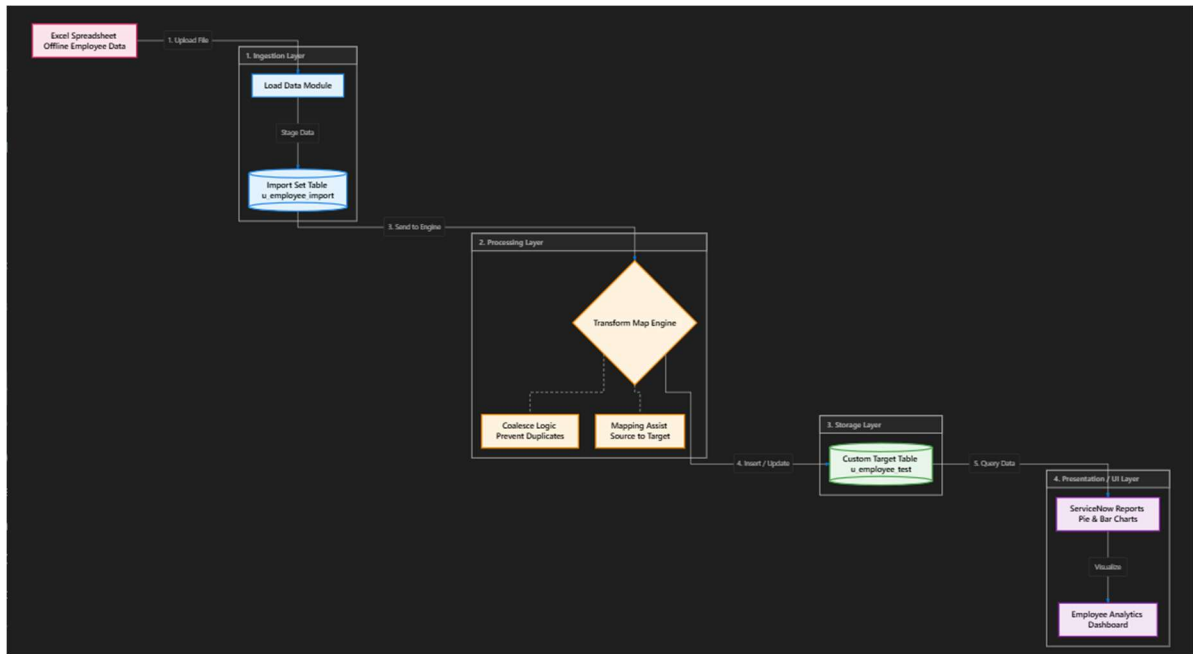

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

| Symbol                                   | Name                   | Description                                                                                                          |
|------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>Oval / Rounded shape</b>              | <b>External Entity</b> | A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway). |
| <b>Rectangle with numbered header</b>    | <b>Process</b>         | An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).                |
| <b>Rectangle (solid fill, no number)</b> | <b>Data Store</b>      | A place where data is held for later use (e.g., Customer Database, Inventory).                                       |
| <b>Labeled arrow</b>                     | <b>Data Flow</b>       | The movement of data between entities, processes, and data stores, labeled with what data is being passed.           |

### Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.

## User Stories

| User Type    | Functional Requirement (Epic) | User Story Number | User Story / Task                                                                    | Acceptance criteria                                                              | Priority | Release  |
|--------------|-------------------------------|-------------------|--------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|----------|----------|
| System Admin | Data Staging                  | USN-1             | As an Admin, I can upload an Excel file via Load Data to create a staging table.     | Data is successfully loaded into u_employee_import.                              | High     | Sprint-1 |
| System Admin | Data Mapping                  | USN-2             | As an Admin, I can map spreadsheet columns to the target table using Mapping Assist. | Source fields accurately map to Target fields (e.g., Name to u_name).            | High     | Sprint-1 |
| System Admin | Deduplication                 | USN-3             | As an Admin, I can enable 'Coalesce' on the Employee ID field.                       | Re-importing the same data updates existing rows instead of creating duplicates. | High     | Sprint-1 |
| HR Manager   | Reporting                     | USN-4             | As an HR Manager, I can view Pie and Bar charts based on the Employee table.         | Reports display accurate counts Grouped by Department and Location.              | Medium   | Sprint-2 |

|              |              |       |                                                                                  |                                                          |        |          |
|--------------|--------------|-------|----------------------------------------------------------------------------------|----------------------------------------------------------|--------|----------|
| System Admin | Dashboarding | USN-5 | As an Admin, I can modify the pa_dashboards ACL to allow Admin Overrides.        | Admin can successfully create and save a new Dashboard.  | High   | Sprint-2 |
| HR Manager   | Analytics    | USN-6 | As an HR Manager, I can view all employee reports consolidated on one Dashboard. | Dashboard displays the 3 created reports simultaneously. | Medium | Sprint-2 |
