Project Title	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	To safely migrate bulk employee data from Excel to a database without creating duplicates, and instantly generate visual reports.
Scope	Implementing an automated data ingestion pipeline using ServiceNow Import Sets and Transform Maps.
Problem Statement	
Description	Manual employee data imports from spreadsheets into the system often cause duplicate records and lack real-time visibility.
Impact	Reduces administrative burden, completely prevents data corruption, and improves management's ability to make quick decisions.
Proposed Solution	
Approach	An automated pipeline utilizing the 'Coalesce' feature on the Employee ID field to automatically update records.
Key Features	- Intelligent record matching (Coalesce). - Dynamic interactive dashboards.

	-Real-time decision-making for quicker loan approvals. -Continuous learning to adapt to evolving financial landscapes.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	ServiceNow Platform (SaaS/PaaS)
Memory	RAM specifications	Standard instance memory
Storage	Disk space for data, models, and logs	ServiceNow DB / Attachments
Software		
Frameworks	Python frameworks	Glide API, Rhino JavaScript
Libraries	Additional libraries	ServiceNow Import Set API, Transform Engine
Development Environment	IDE	ServiceNow Studio / UI
Data		
Data	Source, size, format	Excel spreadsheets (.xlsx)
