

Customer Journey Map (Data Import Experience)

Date	25 September 2026
Team ID	6ab22227a614981d6d2c6451
Project Name	Import Data using Transform Maps (Spreadsheet)

Phase	1. Prepare (Entice)	2. Upload (Enter)	3. Transform (Engage)	4. Validate (Exit)	5. Analyze (Extend)
Steps	Prepares the Excel file containing bulk employee data.	Navigates to "Load Data", creates staging table, uploads Excel.	Configures Transform Map, Maps Fields, enables Coalesce.	Clicks "Transform" and checks the Transform History / Target Table.	Opens the custom Dashboard to view updated visual reports.
Interactions	Editing columns in Excel (Name, Email, Dept, Location).	Interacting with ServiceNow Load Data UI.	Using Mapping Assist tool; setting Coalesce to True.	Viewing "State: Success" logs; verifying inserted/updated rows.	Interacting with Pie and Bar charts; filtering list views.
Goals	"Help me organize this data easily."	"Help me stage this data without breaking the system."	"Help me map this data and avoid creating duplicate employees."	"Help me confirm the data was saved correctly."	"Help me provide actionable insights to management."

Positive Moments	Having all data consolidated in one .xlsx file.	The system auto-generates the u_employee_import staging table.	The Coalesce feature intelligently identifies existing records.	Seeing "Success" and viewing exactly how many rows were inserted vs. updated.	Seeing beautiful, real-time charts populated with the new data.
Negative Moments	Anxiety about formatting the headers correctly.	Information overload on the Load Data screen.	Worrying if the field mapping is incorrect before hitting 'Transform'.	Having to manually navigate to the target table to double-check.	Dealing with ACL permissions (pa_dashboards) blocking dashboard creation.
Opportunities	Provide an Excel template for users to download first.	Automate staging table naming conventions.	Highlight the "Coalesce" button more clearly for beginners.	Provide a direct link to the Target Table on the success screen.	Pre-configure ACL Admin Overrides so admins don't get stuck.
